AI classes for adults

Hands-on classes that make AI easier to understand. For beginners. No sales pitch.

---

1 What can I do with AI?

A first, unhurried try. Everyone uses a free AI assistant on their own phone or a library computer for everyday things: a note, a plan, a simple explanation.

- What an AI assistant is, and isn't
- Asking well
- Everyday uses, hands-on
- Checking answers, because AI can be wrong

---

2 AI without giving away your data

Where your words go when you type into an AI, what never to share, and the privacy settings worth changing, changed together in class.

- Where your chats go
- What never to type
- Privacy settings, hands-on
- Demo: an AI that works with the internet off

---

3 AI scams and your family

Scammers now fake voices, photos and messages with AI. How today's scams work, how to spot them, and the habits that stop them, starting with a family code word made in class. Bring a family member.

- Cloned-voice emergency calls
- Fake videos, photos and texts
- The warning signs
- What to do if it happens

How it works

- 60 or 90 minutes
- In person, hands-on: bring a phone
- Or online, live
- Mornings, afternoons or evenings
- Every attendee takes home a printed mini zine

The room needs

- A screen or projector (HDMI)
- Wi-Fi attendees can use
- Tables, and a power outlet up front

To book

Write to **ask@rhizent.ai** with the class, two or three dates, and in person or online.
